Professional Summary

Junior DevOps Engineer with 1+ year of hands-on experience building CI/CD pipelines, managing cloud infrastructure on AWS, and automating Linux operations across 30+ production nodes at LittleBlackStar VFX. Proficient in GitHub Actions, Docker, Ansible, Python/Bash scripting, and system monitoring — reducing manual operational effort by ~60%. ISC2 Cybersecurity (CC) and AWS Certified Cloud Practitioner, with a security-first approach applied to IAM policies and pipeline hardening.

Experience

Junior DevOps Engineer - LittleBlackStar VFX Pvt. Ltd., Mangalagiri, India *Mar 2025 – Present*

- Built and maintained end-to-end CI/CD pipelines using GitHub Actions — automated builds, linting, security scanning, Docker image pushes to GHCR, and SSH-based production deployments on every release.
- Deployed and managed containerized Python/FastAPI applications using Docker and Docker Compose across 30+ Rocky Linux/RHEL production nodes, ensuring consistent environments from dev to production.
- Automated configuration and maintenance of 50+ infrastructure nodes using Ansible Playbooks — eliminating configuration drift and reducing manual operational effort by ~60%.
- Managed AWS IAM roles and S3 bucket policies following least-privilege principles; wrote Python/Bash scripts for data syncing, scheduled backups, and workflow automation.
- Monitored system performance with Prometheus and Grafana dashboards; administered RHEL servers — user management, patching, log management, and network troubleshooting.
- Collaborated with development teams to support releases, debug pipeline failures, and ship fixes rapidly — minimizing production downtime.

Machine Learning Intern - Stack AI Solutions, Hyderabad, India *Jan 2025 – Mar 2025*

- Built Python-based ML workflows and deployed data pipelines on AWS, applying hands-on EC2, S3, and IAM configuration skills.

Key Projects

ShotTrack – CI/CD & Infrastructure Automation Platform - LittleBlackStar VFX | github.com/BalaMahanth22025

- Designed end-to-end CI/CD pipeline using GitHub Actions with automated testing, linting, security scanning, versioned Docker image builds pushed to GHCR, and SSH-based continuous deployment to production.
- Automated 50+ Linux node provisioning with Ansible; integrated Prometheus/Grafana monitoring with health-check alerting for real-time system failure detection.
- Wrote Python/Bash automation scripts reducing deployment friction and improving incident response time across distributed Linux systems.

Technical Skills

CI/CD & DevOps: GitHub Actions, Jenkins, Docker, Docker Compose, Ansible

Cloud & IaC: AWS (EC2, S3, IAM, VPC), Terraform (familiar)

Languages: Python, Bash, SQL

Linux & Networking: Rocky Linux, RHEL, Ubuntu — permissions, SSH, DNS, VPC, log management

Monitoring: Prometheus, Grafana, CloudWatch, Docker health checks

Security: ISC2 CC, IAM least-privilege, S3 bucket policies, security linting in CI/CD

Version Control: Git, GitHub, GHCR

Education

B.Tech – AI & Data Science | CGPA: 8.86/10 - Lakireddy Balireddy College of Engineering, AP *2021 – 2025*

Certifications

- ISC2 – Certified in Cybersecurity (CC) — security fundamentals, IAM, risk management
- AWS Certified Cloud Practitioner (CCP) — cloud architecture, IAM, compute, storage, networking
